| • Ruby On Rails | • AWS | • Agile/Scrum |
| • PostgreSQL | • Bootstrap | • Ansible |
| • Nginx | • Vue.js | • Linux system |
| • Git Flow | • Circle Ci | administration |

Experience

July 2018 – Present **IT Engineer** - Yangon Press Asia Co. Ltd., Yangon

- Developed Tintan for solving developers' problems in Myanmar using Ruby on Rails. Implemented front-end with technologies such as vue.js, bootstrap and jQuery. For the back-end, used ruby on rails and postgresql as the database. Used multiple AWS technologies such EC2, Route53, S3 and etc. I used the Circle Ci to check building and testing of my code.
- Developed Messenger bot to calculate the fastest route with A-star algorithm. Used Neo4j for faster querying optimization.
- Worked with Agile methodologies and two-week sprints.
- Developed web-scraping feature to get the latest stocks news and send them to slack.

July 2018 – Present **Japan Innovation Academy**

- Created Ruby on Rails learning website (school) on subdomain of tintan using Route53. All the students used the Website as online text book.
- Developed school rails engine inside tintan so we can cut 50% of the cost for company.

April 2018 – June 2018 **Software Developer** - Amicus, Singapore

Software developer, works with a project leader to make new features of website in Singapore Real Estate Solutions.

- Developed the feature to differentiate the housing plans with prices limits or streets by using the C# and microsoft asp.net and by managing databases on microsoft sql server.
- Displayed the result on onemap using leafletjs with customized icons.

July 2017 – August 2017 **Game Developer Intern** - Docentron Pty Ltd, Singapore

- Developed the 2D game with the project team for the company using AgileScrum.
- Developed the design with Tilemaps and html and functions with javascript.

Education & Qualifications

Bachelor of Information Technology, James Cook University.

March 2016 – February 2018
